

Retention Data Center Quick Start – Campus System Data Integration

The RMS Plus system provides the ability for a school to export data files or .PDF files that can be imported into local campus system.

Moving Retention Data Center data to local campus systems

Ruffalo Noel Levitz can provide

- direction and/or instruction for use of the existing Retention Data Center EXPORT DATA’s “Partner Export” that includes all data elements shown on reports
- direction and/or instruction to export specific data elements or create templates for continual use in exporting these same data elements from the assessment(s) so they can create their own specific template(s).

The client titles these templates to their specification within their profile, and exports “at will” a file that can be formatted and imported into their local system(s).

Retrieving .PDF report for import into local campus systems

Separately, should a client be interested, Ruffalo Noel Levitz is set up to create a secure Ruffalo Noel Levitz FTP site for a client, issue login instructions to a designated person or person(s) on campus, and post individual Advisor/Counselor Reports (non-restricted only) as students complete the assessment.

These PDF files are titled by the Identification number loaded at the data center or entered during survey login (example: A1234567.PDF, A2345678.PDF, etc.) These files can be retrieved “at will” by a designated person from the institution and posted to their system(s) if the system allows this function.

An example of how the folder would look is:
